Company presentation

ELKOV elektro is a purely Czech specialized wholesaler of electrical materials, lighting, tools, photovoltaics, and industrial automation.

During more than thirty years of operation, ELKOV elektro has grown not only in terms of turnover and number of branches, but mainly in terms of the portfolio of services provided. Today's ELKOV elektro offers:

- **sale of electrical installation materials and lighting fixtures** at 32 locations and via the e-shop,
- **selection from more than 85,000 stock items from the central warehouse in Brno, 20,000 items from the second central warehouse in Prague, and another 300,000 items on order from almost 2,500 suppliers.**
- **comprehensive project lighting solutions** – from public lighting through office and industrial lighting to intelligent lighting control systems,
- **design of lighting systems including the necessary calculations** according to the applicable standards and investor requirements, calculation of the return on investment for individual solution alternatives, assistance with arranging subsidies, ensuring the installation

of lighting systems, warranty and post-warranty service,

- **Implementation of intelligent city management systems** – so-called Smart City,
- **interior and exterior lighting projects with an emphasis on design and the resulting light scene** – implemented by our subsidiary company myLIGHT,
- **showrooms of lighting fixtures and switches** at selected branches,
- **SERVISBOX mobile storage units**, which save time, money, and energy, and also ensure safe storage of materials directly on the construction site,
- **tool rental.**
- **sale of photovoltaic components** – panels, inverters, charging stations, constructions for photovoltaics, battery systems,
- **sales of low-voltage technologies for security and building administration** – implemented by our subsidiary company VARNET,
- **exclusive representation of the Italian switchboard manufacturer E.T.A.** for the Czech Republic,
- **exclusive representation of the measuring technology manufacturer Pancontrol** for the Czech Republic,
- **exclusive representation of TELE Haase** – an Austrian manufacturer of automation components.

Company development

ELKOV elektro has been on the market for 30 years, and for all of this time we have constantly strived to do one thing. To provide our customers with good solutions. We listen to our customers and everything we do must be somehow beneficial to them.

"We like to have warehouses full of goods, from everyday necessities to items for which we hear the beautiful phrase, 'You really have it, you've really helped me out'. We also strive to ensure that our customers have several alternatives for each product so that everyone can choose. Everywhere we operate, we want to have the 'most packed' warehouse.

In every product range we offer, we want to be professionals that customers can turn to with any requirement.

Michal Vodička

*Chairman of the Board
of Directors*

To this we have added new services that go beyond the experienced boundaries of wholesale tool rental, external warehouse services, or a strong technical background in individual fields.

VARNET, which represents low-voltage systems in our group, has been a part of us since 2019, and since then we can proudly

say that having high-voltage and low-voltage under one roof is a fundamental advantage of our group. We realize that the range of products and services is a key criterion for our customers' success and efficiency.

We truly believe that what we do helps our customers lead better lives."

Basic indicators

of the ELKOV group

Audited turnover of the group for 2023:

5.5 billion CZK

Unaudited turnover of the group for 2024:

5.5 billion CZK

Number of business premises:

ELKOV elektro a.s.

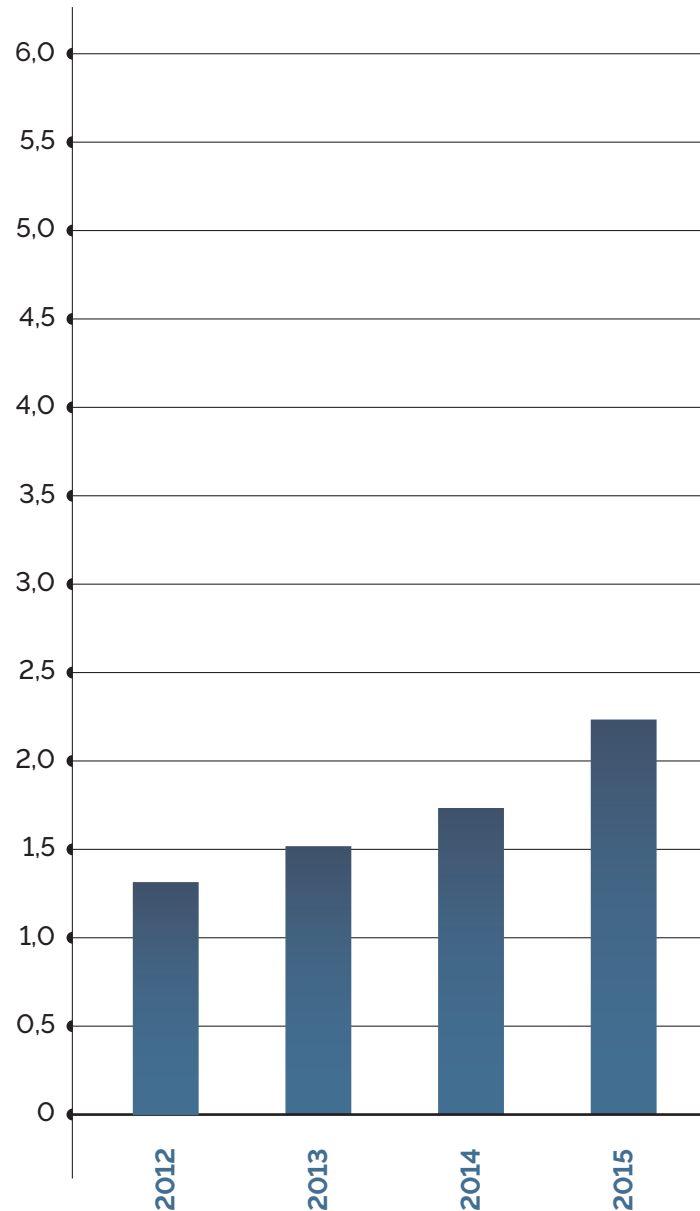

Subsidiaries:

myLIGHT s.r.o.

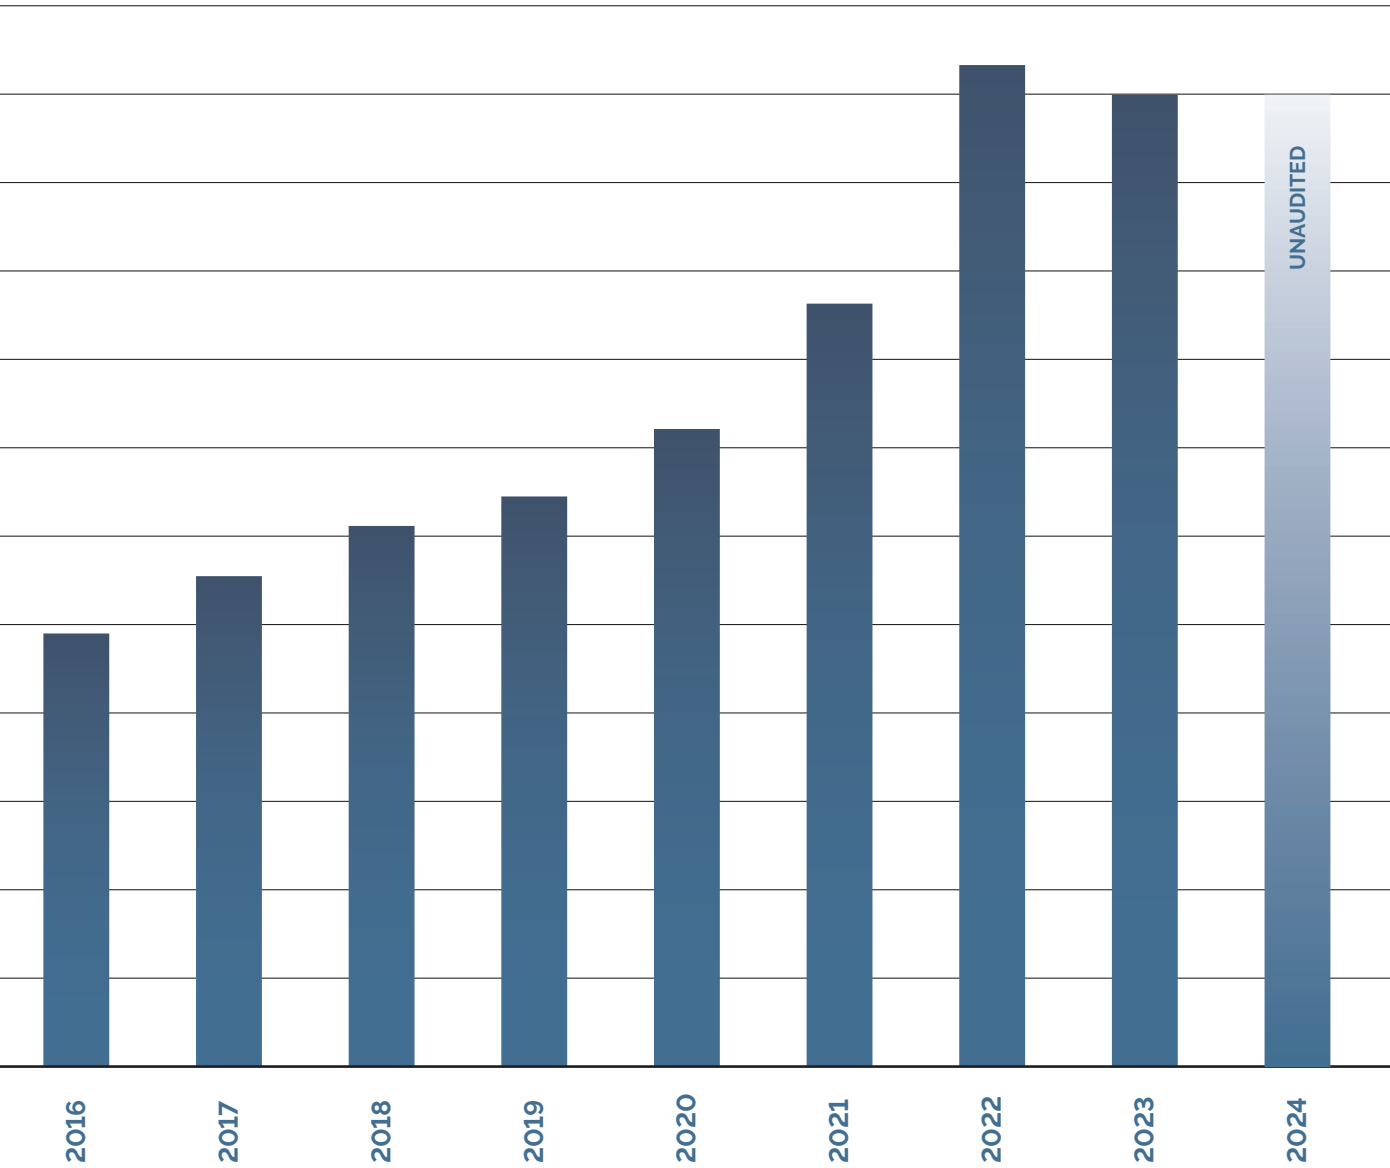

VARNET a.s.

Sister company:

ELMO elektro a.s.

Development in turnover (in billions of CZK)

Commercial network

ELKOV elektro is currently one of the leaders in the sales of electrical materials and lighting in the Czech Republic.

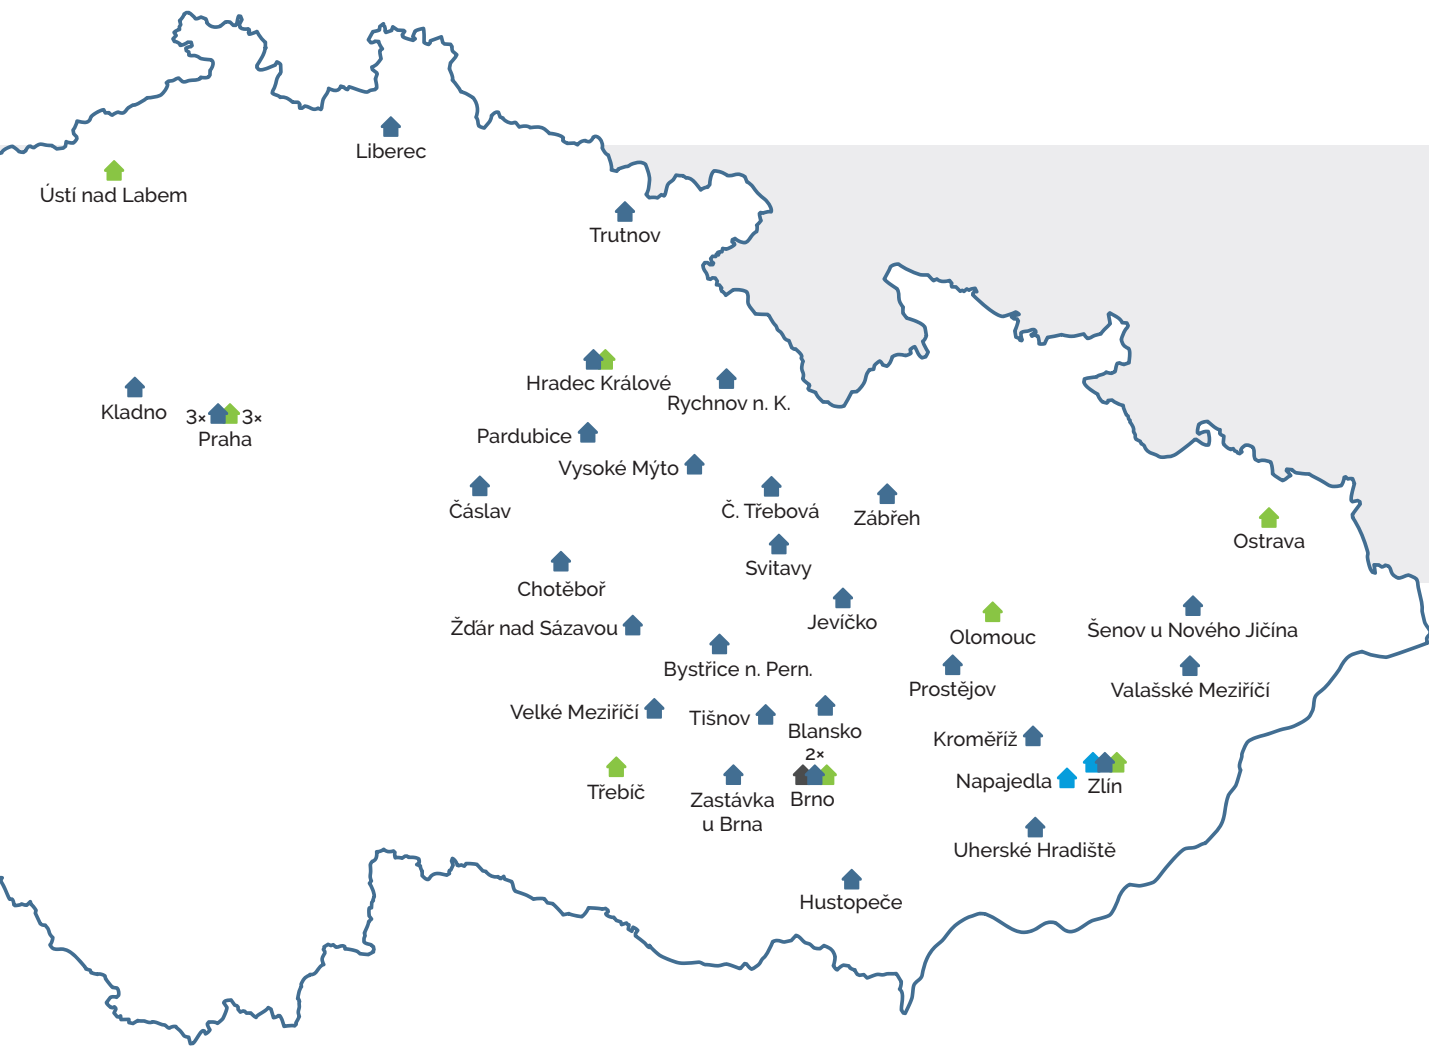

At the ELKOV elektro branches, we serve almost 30,000 customers annually, mainly from assembly and electrical installation companies and small entrepreneurs, and we supply goods for thousands of projects in the Czech Republic and abroad.

Just as the world around us is changing, so is our company. Today, ELKOV elektro is no longer just about products and warehouses, but about a whole range of services – starting with an advanced technical department, a tool rental shop, through a range of logistics services, system deliveries, warehouse management solutions, and even design of electrical engineering solutions for investment units. In addition to all this, we also try to get closer to our customers. That is why we are constantly developing our sales network to be as accessible as possible.

Our priority is the high standard of our business premises, which is why we are constantly developing and modernizing our existing ones. None of this would be possible without the favor and support of our customers, because this is not only a huge responsibility for us, but also the largest engine that keeps us moving forward.

Our e-shop eshop.elkov.cz offers more than 130,000 products with the option of delivery to your business premises or collection in person from our ELKOV elektro branches. Unregistered customers can also shop at retail prices, while online shopping brings several advantages, such as time saving, access to technical information, and an overview of the availability of our goods.

Central warehouses

The first central warehouse of ELKOV elektro in Brno was built in 2007 and serves to supply all branches of the company. It is also a sales point visited by several hundred customers per day.

With the increase in the number of business premises and the expansion of our product portfolio, the need to expand our warehouse capacity is gradually increasing.

Therefore, an extension was built in 2019, increasing the storage and sales space by another 3,600 m². It also enabled the expansion of services by building a new tool shop, lighting showroom, and self-service store.

In 2021, a secondary central warehouse was built in Prague 9, which significantly improved logistics processes, especially for branches in the catchment area. Over an area of 6,000 m², customers will find, in addition to the ELKOV elektro branch, the company VARNET, a tool shop, a lighting show-

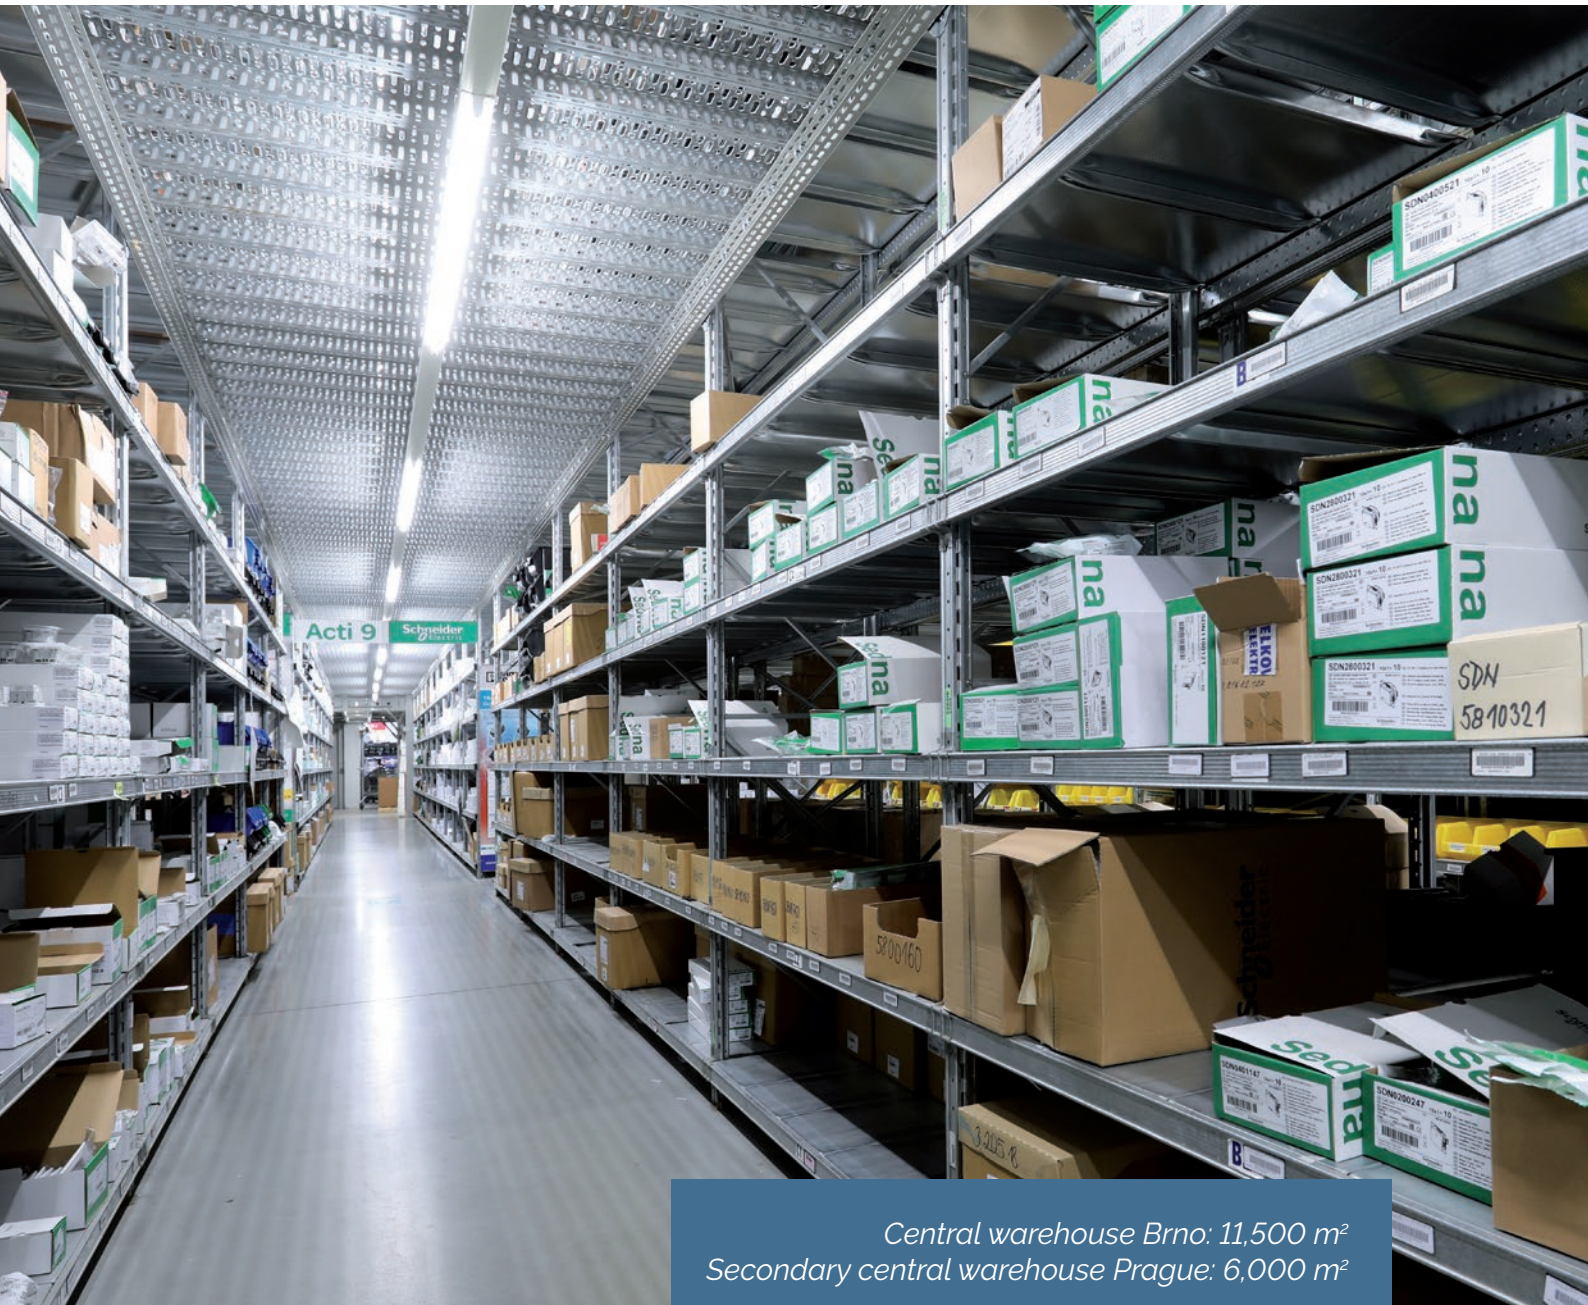

room and the largest showroom of switches and sockets in Prague.

With increasing storage requirements, especially in the area of photovoltaic systems, ETA industrial switchboards and VARNET data switches, the Brno central warehouse was further expanded in 2022 with new steel buildings measuring 2,000 m².

In 2023, the central warehouse was expanded again, this time with the construction of a separate new hall, which provided an additional 1,000 m² of storage space.

The total storage space in the central warehouse thereby increased to a final value of 11,500 m².

*Central warehouse Brno: 11,500 m²
Secondary central warehouse Prague: 6,000 m²*

Product range and services

In the central warehouse in Brno you will find over 85,000 items. At the same time, we are able to offer several million items from the product range of almost 2,500 suppliers with whom we cooperate. The value of warehouse stocks across the entire ELKOV elektro has increased significantly by over 1 billion CZK due to the opening of the secondary central warehouse in Prague and the storage of photovoltaic components.

We focus not only on the purchase and sale of goods, but we also provide technical consultation in the following areas:

- lighting technology,
- switchboard technology,
- storage material,
- photovoltaic systems,
- industrial automation,
- low-voltage technology,
- cables and wires,
- measurement and regulation,
- tools.

At ELKOV elektro, a team of experienced buyers ensures that the offered range is constantly updated and that goods are regularly ordered.

That is why we recently expanded the purchasing department team with product managers who are responsible for the development of the entrusted product range. They also conduct technical training of our employees.

At the same time, our team of product card administrators creates more than 2,500 stock cards every month.

Due to the constant changes in product prices, our team of price analysts processes tends of new supplier price lists every month.

Electrical wiring material

ELKOV elektro provides a complete service from inquiries about the product range to delivery.

The basic product range includes:

- cables and wires,
- switchboards and distribution boards,
- modular circuit breakers and protectors,
- switching and fuse devices,
- surge protectors,
- storage and connecting materials,
- home switches and sockets,
- lightning conductors and lightning conductor materials,
- terminals and terminal blocks,
- heating technology,
- fans,
- thermostats and control technology,
- intelligent building management,
- smart homes,
- batteries and charging technology,
- movable leads,
- control and position switches,
- power protection and switching,
- home doorbells and electrical equipment.

ABB

Industrial automation

We offer technical consultation, cost calculations and supply of the following goods:

- frequency converters, soft starters,
- programmable relays, control systems, control and visualization panels,
- capacitive, inductive, optoelectronic, ultrasonic sensors,
- special sensors – optical frames, laser sensors, detection of transparent materials, contrast marks,
- level, pressure, emission, light sensors,
- terminal switches,
- network components for industrial communication,
- safety modules, safety switches, foot switches, emergency stop controls, light barriers,
- optical and acoustic signaling,
- time monitoring and control relays,
- terminals, connectors,
- control panels, distribution boards, cabinets – sheet steel and stainless steel,
- energy guide chains,
- crane technology – pendant controls, limit switches, radio remote controls,
- motors.

Certification and accreditation

ISO certification

ELKOV elektro has implemented and applies a quality management system according to ČSN EN ISO 9001:2016.

EKO-KOM

ELKOV elektro has a joint performance agreement with EKO-KOM for the take-back and recovery of packaging waste under client number EK-F00040981.

ASEKOL

Through the collective system ASEKOL a.s., ELKOV elektro fulfills the obligations of producers of electrical equipment for the separate collection, take-back, processing, utilization, and disposal of electrical equipment and electrical waste pursuant to Act No. 541/2020 Coll., on waste, as amended. The collective performance agreement with ASEKOL a.s. and ECOBAT s.r.o. ensures that we fulfill our obligation to take back batteries and accumulators, and to process and use waste batteries or accumulators as materials.

Qualified supplier

Our company is registered in the List of Qualified Suppliers, which is maintained by the Ministry for Regional Development (MRD) of the Czech Republic in accordance with Article 226 and the following provisions of Act No. 134/2016 Coll., on Public Procurement. MRD registers suppliers in the list who have met the qualifications pursuant to Article 53 (basic qualification criteria) and Article 54 (professional qualification criteria) of the Public Procurement Act and have demonstrated their fulfillment to MRD through the relevant documents.

ELKOV lighting division

The ELKOV lighting division was established with the aim of providing comprehensive support to customers in the field of modern lighting. Thanks to our wide product portfolio, expert technical support and an individual approach, we offer professional solutions for households, companies, and the public sector.

Light is no longer just a functional part of the interior, but a fundamental design and technological element that affects not only aesthetics, but also well-being, concentration, and health. Modern lighting can increase productivity in offices, support concentration in schools, and create a pleasant atmosphere in homes.

We help customers secure favorable financing and the available subsidies for the modernization of lighting. We offer solutions for both public lighting in municipalities and for complex reconstructions of lighting systems in companies, industrial buildings, and shopping centers. Thanks to this, significant energy savings can be achieved without high initial investment.

Thanks to our extensive inventory of 20,000 items, we have a wide range of products from domestic and international manufacturers.

ELKOV lighting is a reliable partner that can help you create modern, efficient, and sustainable lighting, tailored to your individual needs.

In our projects we use the latest LED technologies, which bring:

- low energy consumption and long lifespan of lights,
- smart lighting control, including biodynamic lighting that adapts to the user's daily rhythm (changing the intensity and temperature of the lighting according to the time of day),
- possibility to integrate with smart homes and industrial automation systems,
- reduction of light smog due to advanced technologies,
- a focus on efficient light distribution.

eELKOV[®]
LIGHTING

Our main suppliers

In the field of lighting technology we offer:

- assessment of the existing lighting system in comparison with LED technology,
- design of a new lighting system according to the applicable standards and hygiene requirements,
- design of public lighting including control systems,
- calculation of the return on investment with financing,
- consultancy and design in the field of lighting system control,
- calculation and design of emergency lighting including battery systems,
- a wide range of lights and light sources,
- certified measurement of illuminance.

We mainly focus on the following areas:

- office lighting,
- industrial lighting (production halls, logistics centers, garages),
- public lighting (street, park, festive, ambient, etc.),
- lighting for shopping centers, hypermarkets and supermarkets,
- lighting for sports facilities and wellness centers,
- lighting for hospitals and medical facilities,
- lighting for schools,
- lighting for apartments and family houses.

Lighting studios

ELKOV elektro lighting studios – your path to perfect lighting.

Our lighting studios are open not only to registered customers, but also to new customers who are looking for modern, economical, and designer lighting.

More than just lighting – we offer a complete lighting service. Our team of experienced professionals will advise you or directly design an individual solution tailored to your needs, space, and style. We will go through the entire process together, at the end of which you will leave with the ideal lighting for your interior or exterior.

Light as part of the atmosphere – today, lighting is no longer just a functional element, but a key design element that influences mood, comfort, and productivity. Thanks to modern LED technologies, we can intelligently control light, e.g., change its intensity and color temperature according to the time of day, thereby supporting biorhythms and health.

A wide portfolio in a single place – in our studios you will find premium interior and exterior lighting from global and Czech brands. We offer ceiling, pendant, wall lights, chandeliers, floor and table lamps as well as seasonal lighting.

Immediate availability – thanks to our extensive warehouse capacity, you can take many products home immediately or order them.

Come and be inspired by ELKOV elektro's lighting studios and discover how the right lighting can take your space to a new level!

Our lighting studios offer you:

- FREE interior and exterior lighting designs,
- complete service during the project,
- sale of lighting fixtures,
- technical support,
- lighting calculations and design,
- consultation.

Lighting studios:

Brno • Prostějov • Žďár nad Sázavou

EKLOV service division

In 2016, ELKOV elektro established the ELKOV service division, which specializes in the sale and rental of tools. Our sales and technical representatives provide advice and sales of tools not only in the field of electricity. Our portfolio also includes occupational health and safety equipment.

The division also focuses on crimping and an offer for HV and VHV. Our portfolio also includes SERVISBOX storage units, which help customers optimize the process of purchasing and storing materials during the implementation of a project.

The ELKOV service division includes:

- tool sales department,
- tool rental,
- SERVISBOX mobile storage units,
- e-Kanban (automatic supply).

servis@elkov.cz
www.elkovservis.cz

Our main suppliers

SERVISBOX

mobile storage units

HAVE ME FILLED

Have the SERVICEBOX filled with material you need for your project.

RENT ME ON SITE

Rent a fully equipped SERVICEBOX for as long as you need it.

PAY ONLY FOR WHAT YOU USE

Return what you don't use. We only invoice the material after the project has been completed.

Types of SERVISBOXES:

- BOX
- TRAILER
- VAN
- CONTAINER

SERVISBOX is a solution for existing and new customers, enabling them to take control of various expensive processes and unplanned expenses that are often not taken into account in the original pricing.

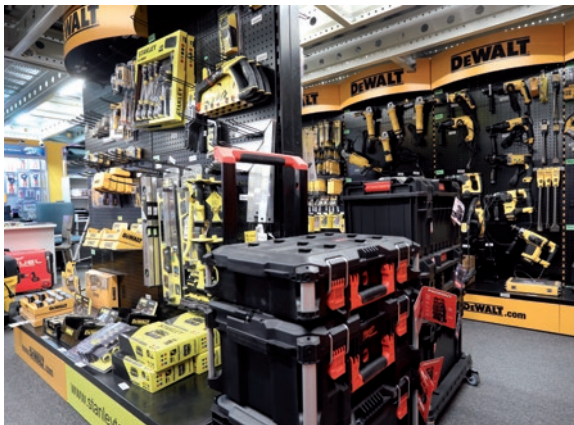

The use of a suitable type of mobile storage unit (SERVISBOX) and its continuous supply, provided by ELKOV service, will significantly simplify, and speed up the acquisition of material. Other important benefits include the safety and mobility of the inventory on the construction site and the possibility to return any unused material. Taken together, all these steps help the customer save time and money.

Sales and rental of tools

Our customers' orders often start with a request, a requirement, or just a rough idea from a superior or investor. It is important to know where, what material, and what the customer wants to do, and after consulting with tool experts, consider purchasing or renting.

We offer the following:

- professional consultation and training,
- specification and selection of items,
- preparation of complete offers,
- tools directly at the customer's business premises,
- sale of tools, work and protective equipment,
- tool rental (Prague-Horní Počernice, Prague-Spořilov, Brno).

ELKOV energy division

The ELKOV energy division was founded in 2015 and specializes in the supply of components for photovoltaic systems and electromobility solutions.

info@elkovenergy.cz
www.elkovenergy.cz

With the growing interest in sustainability and reducing greenhouse gas emissions, photovoltaics are becoming an increasingly important and attractive solution for generating electricity from renewable sources.

ELKOV energy offers you the following:

- **Sales of photovoltaic system components**, such as battery systems, photovoltaic panels, inverters, photovoltaic structures, DC and AC switchboards, connectors and much more.
- **Sales of charging stations** equipped with the latest technology, which offer fast and convenient charging of electric vehicles (ideal for private owners of electric vehicles, public car parks, shops or industrial enterprises).
- **Individual technical support and consultation** in selecting the right solution in the field of photovoltaics and electromobility.
- **Product and technical training** for the sold product range, primarily aimed at companies performing installation work.

VARNET a.s.

In 2019, ELKOV elektro took over the companies Variant plus and Stasanet to create the most significant distributor of low-voltage technologies for security and building management on the Czech market – the company VARNET.

VARNET offers the following:

- the widest range of low-voltage systems on the market,
- Direct connection to major manufacturers,
- The most successful brands in the field of security technologies,
- Large stock with fast delivery,
- Professional technical and project support,
- High standard of technical documentation and service activities,
- Certification of supplied systems and their elements,
- Training – seminars – workshops,
- Branch network in the Czech Republic including 11 branches,
- Professional expert team at the headquarters and the branches.

On-line sales

The e-shop of VARNET is intended for B2B partners who, after registration, gain access to more than 5,000 products divided into industry categories. Fast and easy shopping on the website is supported by filtering and parametric functions. Ordered goods can be sent to the chosen address or collected from any VARNET, ELKOV elektro, or ELMO elektro branch.

The main advantages of online shopping:

- overview of the current product range,
- detailed product information,
- downloads of necessary documentation including software for products,
- display of stock availability at individual branches,
- parametric filtering and product comparison,
- possibility of creating offers with complete administration,
- technical support, FAQ,
- offer of training and workshops including online registration.

Commercial and technical training

The field of low-voltage technologies for security and building management is constantly expanding and innovating. VARNET organizes a large number of presentations, professional and certification training courses, workshops and online webinars for its customers throughout the year.

myLIGHT s.r.o.

myLIGHT was founded in 2013 and focuses on the field of interior and exterior lighting with an emphasis on design and the resulting light scene.

The timeless light showroom offers the opportunity to show what effects can be achieved with the appropriate lighting.

In the myLIGHT lighting studio, it all starts with an idea and a vision. The key is to identify the customer's requirements and ideas and then design and prepare a lighting and technical solution for the entire space.

myLIGHT focuses on both commercial projects and civil construction.

myLIGHT implements projects in the following areas:

- projects mainly dealing with interior, designer lighting for private construction and extensive reconstructions: apartments and family houses including garden lighting, house lighting with the requirement to connect all lighting to a central control system (so-called smart homes),
- lighting of commercial units: stores, showrooms,
- lighting of commercial spaces: restaurants, hotels, guesthouses,
- lighting of historical buildings: interior and exterior with an emphasis on design,
- lighting of facades,
- lighting of fitness and wellness centers.

ELMO elektro a.s.

ELMO was founded in Želechovice-Lípa in 1991. Over the course of more than 30 years of operation, it has become a major player on the electrical installation material market in the Zlín region.

In 2016, the Zlín company ELMO elektro joined the ELKOV group. This merger turned out to be very beneficial for both parties. ELMO elektro is a strong and dynamically developing company, which, thanks to its long-term operation in the Zlín region, has a very good focus and knowledge of the regional market in the field of wholesale of electrical installation materials. ELKOV elektro provides support and facilities for a large, reliable and prosperous companies.

In 2016, ELMO elektro implemented a quality management system according to the ČSN EN ISO 9001:2016 standard and environmental management systems according to the ČSN EN ISO 14001:2016 standard.

In 2017, the storage area was expanded by 144 m² with the help of heavy construction work.

To conclude

ELKOV elektro is a company that helps many organizations and projects. The most visible of which is the support of the Elkov Kasper cycling team.

This team competes in the third highest division of the UCI Continental and regularly participates in World Cup races across Europe. Its riders regularly represent the Czech Republic at top events such as the World and European Championships.

During its existence, ELKOV elektro has helped tens of non-profit organizations and supported many projects focused on supporting children, seniors, and the environment. This was possible thanks to our employees who regularly contribute to charities from their own salaries. Our traditionally supported projects include, e.g., support for children's and youth sports, building babyboxes, preventing injuries to children or supporting social cars for regional charities.
